QAT Case Study/Success Story

CA Gen 6.5 Upgrade to CA Gen 7.5 (Client-Windows XP/Server-HP-UX)

Customer Profile

Industry: Banking
Revenue: 20 billion dollars
Employees: 7500

Customer Overview

Large mid-west commercial banking firm with variety business offering that include corporate banking, credit card processing, merchant solutions, investment banking, retail banking, wealth management and consumer lending.

Business Challenge

The bank's critical and large CA Gen 6.5 client server application required to be upgraded to a supported version of the CA Gen product while mandatory regulatory changes to the same application were being done.

Solution Description

QAT devised a solution to upgrade the banks CA Gen 6.5 development environment and runtime environments including 3rd party software to CA Gen 7.5 while the regulatory changes were being made to the bank system. QAT provided project planning, project management, 3rd party infrastructure support/installation, actual upgrade of the CA Gen environments and application testing.

Business Impact

QAT upgraded the bank's critical CA Gen Client Server system to CA Gen 7.5 on-time and on-budget. And since QAT's solution did the complete upgrade during a development cycle significant savings application testing was achieved.
